

## OVERVIEW

My local petting zoo is a mere 6 years old and has an outdated, text-based website. I want to rebuild their site and give it user-focused features with room to grow. I want the zoo to have a more professional web presence to help drive traffic. I don't expect to be able to produce a fully fleshed-out site over the next 8 weeks, but instead want to focus on 4 key features.

## FEATURES

1. Order form: I want to work towards having the option to order season-passes online.
2. Calendar: A built-in Google Calendar with the operation hours listed.
3. Database: A searchable database of the types of animals in the zoo and information about each one.
4. Search bar: Lastly, I will implement a search bar and make the site fully searchable.

## CLASSES/TABLES

- LIST ALL
- SIZE
- ORIGIN
- TYPE
- FOOD TYPE
- SEARCH ALL

## TECHNOLOGIES

- C#
- ASP.Net
- HTML/CSS
- Bootstrap 4
- Javascript

## SKILLS TO LEARN

- Search capabilities
- Setting up purchase capabilities
- Learn and implement Javascript
